Miraflex was established in the late '80s with the aim of developing the most suitable children's frames ensuring, for every age group from newborn to teenagers, the best mix between safety, quality, functionality and aesthetics. Miraflex with the great experience gained in these years can offer a great range of frames designed by specialists consisting with the requirements and recommendations of eye care professionals such as ophthalmologists, orthoptists, opticians and optometrists. The children's frame shall correct the vision defect and allow the right development of visual acuity without impeding its daily activities.

A child's frame is not just a scaled down adult frame (children's facial cranial measurements are completely different) and therefore shall be developed in accordance with stringent criteria. Each Miraflex frames is developed following a well defined process that take into consideration:

Materials: with the age of the children. For small children, up to 5 or 6 years, light, soft, pliable materials with no metal or assembled parts, and for the older kids acetate, nylon, TR-90 etc., however metal frames are not recommended for children.

Size & Shape: Miraflex proposes a large variety of sizes and shapes. Our frames are designed keeping in mind the facial-cranial measurements of the children in the different age groups to achieve an optimum centred adjustment to the child's face.

Nose Bridge: The child's nose crest develops as the child grows and it has measurements similar to the one of an adult around 13 years. Almost 90 % of the glasses weight rests on the patients nose and therefore is essential to correctly distribute the weight. Miraflex offers different sizes and nose bridges so that the optician/optometrist may select the most appropriate frame.

Safety: Safety for babies and young children is the most important feature to take into consideration by the parents. To avoid facial trauma Miraflex offers frames made in a single piece, in flexible and soft material to guarantee maximum protection.

Temple: The temple should not press the child's face and, ideally, the temples taper the curvature of the patient's ears without deforming the curves.

Functionality: Kids are energetic and constantly moving around and discovering. Whether playing, jumping, doing sports or just knocking around, kids are moving and we recommend an elastic headband to keep the frame centered on the patients face and snug to their eyes. This will help consistent correction while the patient is living an active life even while practicing sports. Both the Flexible & Safe and Terryflex frames come with an elastic headband.

Styles: It is important that the young patient likes the frame. With the vast number of colours available and many different finishing and shapes, the designs of Miraflex frames have been selected so that also the child may participate, under the supervision of the optician/optometrist, to the decision making process. A well fitted frame and an happy patient is the correct combination so that the patient will use the glasses permanently and correctly with little resistance.

Flexible&Safe

Non-metal parts and hinge free construction reduce the risk of facial and eye trauma.

Great for babies and toddlers. Impact and stress resistant.

Miraflex frames have a bridge anatomically designed to distribute the corrective lens and frame weight over a larger surface, increasing wearer comfort.

A collection with a special nose bridge for children with small nose bone has been developed together with a new generation of Flexible&Safe frames.

Unique light, flexible and malleable materials and a large number of sizes and shapes make possible to optimise the adjustment of the frame to the face of the child to allow early correction of refractive errors and strabismus treatments.

A special adjustable and electronically welded elastic head band keeps the frame snug and centred to allow optimal optical correction and perfect occlusion treatment.

These frames have received appreciation and awards from ophthalmologists, orthoptists, optometrists and at international exhibitions.

These frames are fully compliant with the Consensus Statement made by the World Society of Paediatric Ophthalmology & Strabismus (WSPOS) for spectacle frames for children.

Flexible
&
Safe

Flexible&Safe

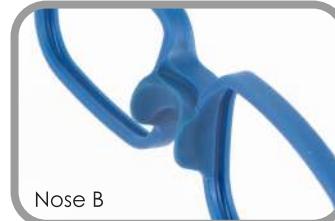

Flexible & Safe

New Generation

A double injected frame with two different nose bridges,
one for a standard fitting (nose A)
and one thicker (nose B) for special needs.

Both the nose bridges are made in a softer and comfortable material.

The frontal has been made with a stronger but soft material
for a better lens fitting.

A new special hinge has been developed for a better fit and a
more fashionable look.

Trial Frame

Miraflex Trial frame is based on a chassis with the same characteristics of the Flexible & Safe collection, and a mechanism that will make possible to define the astigmatism axis.

It is light and comfortable and it is the right solution for solving children's refraction problems.

It fits the children's facial cranial measurements.

Thanks to the adjustable elastic band, the frame remains well centered on the patient's face.

This will allow to make a full vision test.

The lens holding rings accept up to three standard 38 mm lenses.

Sport Vista

Miraflex Sport Vista frames have been developed in accordance with Directive 93/42 and satisfy the tests of the ISO 12870:2012.

The Miraflex Sport Vista frames meet the U.S. ASTM F803-11 standard to protect the eyes while practicing sports such as Tennis, Squash, Baseball.

It is not suitable for sports like Hockey or Golf.

Should only be used with polycarbonate lenses with a minimum thickness of 2mm.

The corrective lenses must have a power between +6 and -6 D.

NOTE: Nose, lateral protections and bands are also available as a replacement.

Warning: Miraflex Sport Vista frames do not totally eliminate the risk of injury, in any case they will minimize or significantly reduce such possibility.

Charms

A collection of soft rubber charms for use on the arms of Miraflex frames.

You simply slide on and off the charm on temple, allowing to change the colour and style of the glasses as often as you wish.

The charms are made of soft silicon rubber and fit approximately 85% of all children's glasses.

**Please note that the charms are NOT SUITABLE for children under 36 months due to choking hazard.
This product is not a toy.**

Temple tips

New soft adjustable temple tips are available in two sizes to fit all the Flexible&Safe models.

You only have to cut the temple, put the tip, decide which is the correct position and fix it with two small screws.

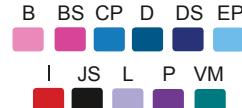

For special needs a long headstrap is also available.
You can cut the temple, insert the band and fix it with two small screw.

Temple Tip S

for all the Flexible&Safe models except:
MK0, MK1, MK2, NK48,
NK50, EV

Temple Tip M

for models:
MK0, MK1, MK2, NK48,
NK50, EV

Long Headband

for all the Flexible&Safe models

Cephalic Headband

for all the Flexible&Safe models
